Professional Summary

Computer Science graduate with practical experience in frontend development, enterprise ERP applications, and AI-powered Retrieval-Augmented Generation (RAG) systems. Skilled in designing responsive web applications using HTML5, CSS3, JavaScript, React.js, and Bootstrap, with experience integrating REST APIs and building scalable software solutions. Passionate about software engineering, problem solving, and continuously learning modern technologies to build impactful applications.

Technical Skills

Programming Languages: Python, JavaScript (ES6+), Java, C

Frontend: HTML5, CSS3, Bootstrap 5, React.js, Responsive Web Design

Backend: REST APIs, Supabase

Databases: PostgreSQL, MySQL, FAISS

AI Technologies: LangChain, FAISS, Ollama, LLaMA, Sentence Transformers, Retrieval-Augmented Generation (RAG)

Developer Tools: Git, GitHub, VS Code, Linux

Professional Experience

Frontend Developer Intern

Present

CoreMicron

- Developed responsive ERP application modules using HTML5, CSS3, JavaScript, Bootstrap.
- Built reusable UI components to improve application consistency and maintainability.
- Integrated REST APIs for seamless frontend and backend communication.
- Optimized web pages for desktop and mobile responsiveness.
- Collaborated with developers using Git and GitHub in a team-based development workflow.
- Performed debugging, testing, and feature enhancements to improve software quality.

Projects

Internal Stock Transfer Module (ERP System)

Tech Stack: HTML5, CSS3, JavaScript, Bootstrap, Git

- Designed and developed an Internal Stock Transfer module for an ERP application.
- Implemented inventory transfer workflows between warehouses and departments.
- Built responsive interfaces for creating, tracking, and managing stock transfers.
- Integrated backend APIs for inventory retrieval and transaction updates.
- Improved inventory management by streamlining stock movement processes.

DrugGPT – Multi-Agent Retrieval-Augmented Generation System

Tech Stack: Python, LangChain, FAISS, Ollama, LLaMA, Sentence Transformers

- Developed an AI-powered Retrieval-Augmented Generation (RAG) system to answer drug-related queries using Large Language Models.
- Implemented semantic search using FAISS vector databases and Sentence Transformers for accurate document retrieval.
- Integrated LangChain with Ollama and LLaMA models to generate context-aware and retrieval-grounded responses.
- Designed a modular architecture consisting of retrieval, generation, and validation components.
- Improved response quality by combining vector search with Large Language Models.

Education

Bachelor of Technology (B.Tech) in Computer Science and Engineering MEA Engineering College CGPA: 8.30/10.00	2022 – 2026
Higher Secondary Education PMSAMAHSS Chemmenkadavu Score: 1111/1200	2019 – 2021

Leadership & Activities

Secretary – FOSS Club	June 2025 – Present
• Organized technical workshops and open-source awareness programs for students. • Coordinated technical events, documentation, and club activities. • Promoted collaborative learning and participation in open-source projects.	

Certifications

- Cyber Security and Ethical Hacking Internship – CodTech IT Solutions
- React Native Application Development Workshop
- C++ Programming Bootcamp – DevTown
